REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: The prior art does not teach nor suggest the white conductive primer composition as set forth in steps a-c and formula 1 of claim 1, and its subsequent use in an electrostatic coating method as set forth in claims 10-11. the closest prior art is as follows: EP 1 600 484 discloses a white conductive primer composition and coating method, the composition comprising tin oxide covering layer containing tungsten, but not teaching the instant composition or formula; JP 2204-075735 teaches a primer composition enabling electrostatic coating utilizing mica coated with conductive metal oxide powders (tin oxide, etc) but not teaching the instant composition or formula; JP 07-090150 teaches imparting antistatic properties using titania particles of specific dimensions doped with tin oxide for conductivity for use in molding resin compositions but not teaching the instant composition or formula for electrostatic coating; US 6632276 teaches conductive pigment powders comprising tin oxide doped with phosphorous, but not teaching the instant composition or formula for electrostatic coating; US 77407 606 teaches producing titania powder having an electro conductive coating comprising alkali metals and metals with valance of 4 or less by a solution/ precipitation route, but fails to teach the instant composition or formula, nor its use for electrostatic coating. It is the Examiner's opinion that the Stated Prior Art does not teach, nor fairly suggest to combine, the cited references to produce the invention in this Application.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
